

Below are several problems, all of which are within your ability. As a point of transparency, I would consider any of the problems above the line fair exam style questions.

1. Given `myDict = {"a": 10, "b": 30, "c": 20 }`, write code to print
 - (a) the value associate with "b"
 - (b) the key associated with 20
 2. Given `myDict = {90 : "A", 80 : "B", 70 : "C" }`, write code to print
 - (a) the keys
 - (b) the values
 - (c) the key value pairs
 - (d) the key value pairs in acceding order based on key
 - (e) the key value pairs in acceding order based on value
-

3. Print all the words from the **Address at Rice University on the Nation's Space Effort** speech along with the amount of times each word appears. The contents of that speech can be found here https://en.wikipedia.org/wiki/We_choose_to_go_to_the_Moon.
